(and That Can Never  
Under-Report FFs)

## What are F-Numbers ?

The F-Number System (ASTM E-1155) is a rational, comprehensive, and extraordinarily effective methodology for specifying and controlling both floor flatness and levelness in all situations where the traffic patterns are unconstrained.

F-Numbers replace all forms of the traditional "gap under the straightedge" type tolerance, since every such format - regardless of wording - is known to be incompetent per force. For reasons that quickly become obvious upon use, F-Numbers are also much superior to both the TR-34 Property II and Property IV Free Movement and the DIN 18202 5.4 Table 3 specification formats.

As explained below, both those systems suffer from serious practical problems owing to their inflexibility, unreality, and failure to address equitable remedy.

The rules for collecting the F-Number data, making the F-Number calculations, and reporting the F-Number results are all set forth in ASTM E 1155M: Standard Test Method for Determining FF Floor Flatness and FL Floor Levelness Numbers (Metric).

## Basic properties of flatness and levelness

F-Numbers and TR34 rely on the same basic properties of flatness and levelness. Flatness is based on the floor's curvature over a 600mm span (Figure 1).

In the F-Number system, this is called 600mm curvature or  $q$ . TR34 called, it Property II in Editions 1-3, but changed the name to Property F in Edition 4.

**Figure 1**

**600mm curvature, the basic property of flatness**

Levelness is based on the floor's slope over a span of 3m as shown below in Figure 2. In the F-Number system, this is called the 3m slope or  $z$ . TR34 called it Property IV in Editions 1-3, but changed the name to Property E in Edition 4.

**Figure 2**

**3m slope, the basic property of floor levelness**

These basic properties in the F-Number and TR34 systems are not merely similar.

They are exactly the same.

600mm curvature, Property II, and Property F are just different names for the same thing. Likewise, 3m slope, Property IV, and Property E are all synonymous.

## F 넘버란 무엇인가?

F number 시스템은(ASTM E-1155)은 자유로운 주행 패턴의 모든 상황에 대한 평탄도(FF)와 레벨도(FL)를 확인하고 조정하기 위한 합리적이고, 종합적이며 특별히 효과적인 방법론 입니다. F number 계산을 위한 F number 데이터 수집과 F number 결과값에 대한 보고서에 따른 규칙은 ASTM E1155 M (FF -바닥 평탄도와 FL - 바닥 레벨도 넘버를 결정하는 테스트 표준 방법)과 ACI 117에 준합니다.

### 평탄도와 레벨도의 기본 특징

F number 평탄도(FF값)는 600mm 사이 바닥의 굴곡 (그림 1)에 기초를 두고 있습니다. F number 시스템에서 600mm 굴곡률을  $q$ 라고 명기합니다.

F number 레벨도(FL값)는 3M 간격 바닥 경사면 (그림2)에 기초를 두고 있습니다. F number 시스템에서 3M 경사면을  $Z$ 라고 명기합니다.
